line and is not really an added cost when you realize that it is uickly returned to you in reduced operating costs and lessened lepreciation — plus vastly improved motor performance!

Forty-two of the greatest oil companies in the world purchase ETHYL brand of anti-knock compound to add to their gasoline, because they know it is the only genuine anti-knock, high compression ingredient that is commercially practical. Developed after seven years of intensive research, the expenditu of vast sums of money and the testing of more than 33,000 separate chemical compounds, Ethyl has made it possible to develop the modern high compression motor for everyday commercial use. The increased speed and power, added smoothness and flexibility, the reduced fuel consumption and lowered operating costs that go with high compression are possible only because of Ethyl.

a few cents more to produce, has brought many imitators, mark-eting so-called high compression gasolines, totally inferior in quality and results. Insist on genuine Ethyl—sold only by authorized dis-tributors from pumps that bear the Ethyl trade mark.
