

Frayed electric cords?

...NOT IN MY HOUSE!

"I KNOW that worn electric cords can cause blown fuses and other inconveniences, so I repair my appliance and lamp cords as soon as the insulation frays. It's easy to do! If the cord is frayed in the middle, each wire should be wrapped separately with electrician's tape, with no bare wires left exposed. Then tape the two wires together. For repairing cords frayed near the plug, follow these simple instructions:"

IMPORTANT!

-First disconnect the cord from the outlet!-

1. Unloosen screws and pull wires from plug.

RIGHT WAY—Wires around prongs. When cord is pulled, strain is put on prongs instead of connection.

2. Cut off frayed part of wires.

WRONG WAY—Wires not wrapped around prongs. A quick pull might tear them loose.

3. Scrape insulation off ends of wires, reconnect plug.
