

**TRANSISTOR** — That's the name of this new amazingly simple device which performs nearly all the functions of an ordinary vacuum tube. It serves as an amplifier or oscillator and is less than an inch long.

## Radio-Television Broadcasts Will Feature Fair at Pomona

A notable event in connection with the reopening of Los Angeles County Fair in Pomona on Sept. 17, following its war-time service, will be the dedication of one of the largest and most modern radio-television broadcasting buildings in the country.

The new department will occupy a beautiful exposition building completed since the last fair and having 46,000 square feet of unobstructed floor space. Half of the building is a broadcasting theater with a seating capacity of 2,000 and equipped with a stage containing facilities for handling the largest coast to coast shows.

There will be a technician and announcer on duty 15 hours a day. Three direct class "A" lines with order wire for each will connect the fair grounds with radio central in Los Angeles. There will be five remote lines from the radio building to key points on the grounds from

which "what's going on" programs originate.

Acquisition of the radio-television facilities is a part of the \$2,000,000 reconversion and construction program in progress on the 350-acre fair grounds. The huge palace of agriculture, destroyed soon after the last fair in 1941, has been rebuilt and will be ready in ample time for the fair reopening.

It is planned to have Governor Warren preside at the dedication. The huge new steel and concrete pavilions are also nearing completion as is the building to house the new totalizer board at the track.

## POLIO CASES IN L. A. FOLLOW 1946 TREND

The total number of poliomyelitis cases for the Los Angeles area has surpassed the five-year median for the area to date. The course of the present outbreak of poliomyelitis may be said to be closely following that of 1946, except that it is about two weeks earlier.

## Career Plans Explained by Sgt. Callison

According to the local U. S. Army and U. S. Air Force recruiting station commander, J. R. Callison, there still are vacancies in the U. S. Army under the Army Career Plan, and vacancies in the U. S. Air Force under the Aviation Career Plan for male high school graduates. Male high school graduates who can meet physical requirements are eligible to enlist for three years under one of these career plans.

Sergeant Callison extends an invitation to all male high school graduates and their parents or guardians to come to his office, 1337 El Prado, Room 6, Torrance, to discuss in detail the advantages and opportunities under the career plan.

You cannot teach a child to take care of himself unless you will let him try to take care of himself. He will make mistakes; and out of these mistakes will come his wisdom.

H. W. Beecher

The ratio of cases for the population is not alarming and is below that of other epidemic areas. Clark said: "Again it is recommended to the public that over-tiring and extreme fatigue be avoided for factors such as physical exhaustion and undue exposure to chilling may precipitate paralysis in any person who has the virus. "Adults as well as children should maintain good hygienic measures and if in doubt concerning an illness, should consult their private physician."

As this outbreak is advancing older age groups are being hit. From January to May 66 percent of the cases were under 10 years of age. Now, however, a larger percentage of persons in the older age group are being involved, he disclosed.
