### How to Attain Normal Nerve Function

You may have read something recently about "normal nerve function." Much more will probably be written on this subject in the near future. You feel, no doubt, that you have not been much enlightened by what you have read, for it is written in learned and somewhat technical language, not well suited to the understanding of a layman.

What is normal nerve function? In spite of what you have read, there is not much mystery about it. The purpose of this article is to set forth briefly in clear, understandable English how your health depends on your nerves and how those nerves can be kept in normal condition.

You have heard of the noted Dr. Locke of Canada. What did he do? He adjusted the bones of the feet to take pressure off nerves that were crying out in pain. His work of removing nerve pressure brought comfort not only to the feet but sometimes to other parts of the body, especially joints that had symptoms of arthritis.

You have heard of Bonsetter, Reese, of Ohio. He was known throughout the United States for his remarkable service to athletes and to other persons from various walks of life. What did he do? He found bones that were out of their normal position and were causing pain. He then put those bones back in normal position and relieved the pain.

You have heard of the famous Dr. Lorenz, of Vienna. What did he do? He used his hands to manipulate bones and in doing that he freed nerves from pressure and tension so that they could do their normal work.
