EDITORIALS

Oil Progress Week

The petroleum industry's 10th annual Oil Progress Week begins this year on Oct. 13. This is a time when, according to the Oil Information Committee, "the 1,650,000 men and women of the oil business report to the nation on accomplishments to date; on plans for the future."

It is doubtful that the whole story of the future."

It is doubtful that the whole story of the oil industry's accomplishments could be told in anything less than volumes. Contributions made by petroleum — to our nation's economic health, our daily lives, our national defense—are astounding to those unfamiliar with the business. For examples, we have only to look around us.

Perhaps the most newsworthy, at the moment, is to be found in the vast highway construction program throughout the 48 states. Asphalt, an important form of petroleum, will provide many thousands of miles of these new roadways with smooth, durable, and low-cost surfacing.

But asphalt is only one petroleum product. Petroleum fuels furnish our country with 67 per cent of its energy requirements. There are fuel oils, lubricants and gasolines. One reason for this widespread utilization of oil is its low price. A striking example is the cost of driving your automobile—an average of only two cents per mile for fuel. In addition there are products containing petroleum derivatives such as the fertilizers and herbicides which help our farmers grow more per acre every year, antibiotics and other drugs, which help America maintain the highest other drugs, which help America maintain the highest health standards in the world; clothing containing dacron, orlon, and other synthetic fibers, rapidly increasing in popularity; and some thousands of products containing petroleum derivatives ranging from toothbrushes to trans-Atlantic telephone cables.

These are only a few of the facts being told-proudly America's oil business as it nears convolving to the polynomial of the product of the periods of the product of the product of the periods of the product of the periods of the product of the periods o

These are only a few of the facts being told-proudly by America's oil business as it nears completion of its 98th year of existence. Its annual celebration—Oil Progress Week—is aptly named. For it is in large measure due to the contributions of oil that our nation has progressed from a third-rate power to a position in world leadership. We are proud to join the rest of the nation in saluting the netrolarm industry of America, truly an industry of

the petroleum industry of America; truly an industry of people, products, and progress.

Lagging Behind

Third quarter distributions of sales tax collections in California show again how far Torrance lags behind its sister cities in commercial development.

While Torrance, with nearly 100,000 population, can expect to receive \$186,900 for the third quarter; Inglewood,

which has a little more than half of Torrance's population, will get more than \$325,000.

will get more than \$325,000.
Compton, whose population is considerably less than
Torrance's, is slated to receive nearly \$300,000. Culver
City, also smaller than Torrance, gets nearly \$220,000. So
it goes with Santa Monica, South Gate, Whittier, Huntingto Park—all cities smaller than Torrance whose sales tax receipts are above those received here.

The figures should spur city officials and community leaders to do all in their power to encourage commercial

development in Torrance in keeping with its area and

THE FREELANCER by Tom Rische

Someone's Gonna Get Kissed

The Oriental's View on Guilt

Dear Ann: I read your column every day and decided you must get awful tired of complaints, gripes, and heartbreaking stories. I made arrow and the wind with a complaints of the column with a column heartbreaking stories. I made up my mind to write you another kind of letter, just to help you keep a healthy perspective.

help you keep a healthy perspective.

I have a wonderful husband and six children between the ages of 2 and 9. Three are dishwashers and clean off the table after meals. They pick up their toys when they've finished playing with them and watch the younger ones as closely as I would.

They are growing up with the idea of being helpful. When they are 15 I won't have to yell myself hoarse to get them to do things.

My husband cheerfully gives me a lift around the house. I never have to ask him to help. He sees what there is to be done, and he sets a wonderful example, by going ahead and doing it. So you see, Ann, there ARE some happy normal families around. Just fho u ght you might like to know.—B.J.S.

Thank you for the day-

Thank you for the day-brightener. Sure, I know there are some happy, nor-mal people around, but trou-ble comes to even the happy and normal ones. This is part of life that makes us appreci-ate the good days. How would we know what happiness is if we had no sorrows?

three weeks ago in a large office downtown. I was brought up in a small town, Ann, and I know I have a few things to learn but I'm not

stupid, just inexperienced.

I was at once shocked at the language used around the office and the familiarity between the fellows and girls.

office and the familiarity between the fellows and girls. They pinch each other for a joke, and so on.

I told one of the girls that I'd never seen such goings-ord and she advised me to "keep it under my hat" or they would think I was square.

The other night as I was leaving, one of the fellows pretended to help me with my lacket and he got pretty "handy" in the process. I swung around mostly in fight, and his glasses caught in my sleeve and unfortunately were broken.

He became furious, said I did it on purpose and that he was sending me a bill for the new glasses. Do you think I should pay for them? I'm terribly upset over the whole thing but I want to do what's right.—V.F.

Let the gink pay for his

have been no accident. May-be this will teach the smart-alee not to horse around with small-town girls. 会 京 京

Dear Ann: I'm an invalid and have a problem. Because of my condition I must employ two women at all times. I need a cook-housekeeper and a nurse-companion. My home is beautiful and I have fine linen, silver, and knick-knacks about.

In the past three years I've had at least 16 different employes. Some have been fired, others have left. Many nice things have disappeared into thin air and I can't do one thing about it because I never know what's missing until it's too late.

Would it be wise to insist on being present when the girls pack their suitcases? Is there a law against this? Please advise me.—I.G.

There's no law against be-

There's no law against be There's no law against be-ing present when a girl packs her suitcase to leave your employ. I suggest from now on, you tell the departing girls that you mean no of-fense, but as a mater of rou-tine you'd like to witness her packing so if anything is missing she won't be held re-sponsible. Explain this is for her protection as well as your you.

May you ever heard of references? Perhaps if you'd check on the girls in advance you wouldn't have to worry about them stealing the kitchen sink when they left. And going into the problem, deeper, still, is there a possibility that if you were easier to get along with you wouldn't have so many girls leaving—and so much stuff leaving with them?

(Ann Landers will be happy to help you with your problems, Send them to her in care of the HERALD and enclose a stamped, self-ad dressed envelope.)

Mishandling of Reynolds Case.

Taipeh, Taiwan (Formosa)
—MAAG knew that under Chinese law a person killing another is guilty until he proves himself innocent. This is the opposite of U. S. law. MAAG permitted Sgt. Reynolds after the shooting to run around Taipeh, without any confinement whatever, as though they believed him innocent of any wrong doing. This infuriated the Chinese people. Then MAAG gave the impression that a trial may not even be necessary, as though prejudging the case only on the statement of Sgt. Reynolds that he shot in self-defense. U. S. Ambasador Karl Rankin, one of our top-flight career diplomats, who has done so much to cement relations and friendship between our two countries, advised Washington that a trial should be held and it was so ordered.

From the Chinese point of view the Wole trial was a

should be held and it was so ordered.

From the Chinese point of view the whole trial was a farce because — both the prosecutor and the defense counsel were U. S. Army men—the jury was composed of U. S. Army personnel and the entire atmosphere of the court room was indeed partial to Sgt. Reynolds. The scene of the defense and prosecuting attorneys exchanging information, amicably passing smokes across the counsel table, and later drinking and eating together are incidents not conducive to confidence that the trial was being conducted fairly to the deceased (* c. an or the people of Formosa. or the people of Formosa.

the eaction of the Chinese man in the street and the local press.

the local press.

*** **

Finally, when the jury announced its acquittal, the MAAG personnel applauded and shouted their approval, while the Chinese present bowed their heads in respect for the deceased and widow and filed out of the courtroom. Soon after, MAAG whisked Reynolds and his family out of Taipeh in a last gesture of insult to the

Editor's Note: This is the inside story of the infamous "Reynolds Case" in Formosa, which led to the rioting and destruction of the U. S. embassy . . . and created much irreparable damage to the good relations between the United States and the Republic of China. It is the result of exhaustive on-the-spot investigations by weteran correspondent John Morley in Formosa.

Part II—MAAG Mistakes and Mishandling of Reynolds Case.

Taipeh, Taiwan (Formosa)

U. S. Ambassador Kari Karisin showed me photographs of rioters on the balcony of the U. S. embassy with police standing by not in the least interfering with the destruction going on. For this the Chinese government assumed full responsibility and their payment of total compensation for the damage to U. S. property fulfilled this phase of their obligation.

*** ** **

In my interview with Mrs. Liu we confirmed rumors that the shooting of her husband was not just the result of his peeking at Mrs. Reynolds' bath — but that Sgt. Reynolds and Liu Tze-Jan were engaged in some "illegal dealings" — and the shooting might have had something to do with that. This phase was never disecussed in the court-martial. Mrs. Liu also told this reporter that "she had accompanied her husband on several occasions to the Reynolds residence and waited outside while he went in to see Sgt. Reynolds "about some 'business'." Reynolds testified that he had never seen Liu before in his life.

Mrs. Liu also informed us that Reynolds greeted her by name on several occasions on the street — while Reynolds denied that he ever saw her in his life. The fact that the police found the body a considerable distance from where the shooting took place was never explained. The fact that Reynolds shot the "intruder" twice, after wounding him the first time, is

Switch: Ann Gets a Mash Note somewhat beyond the point of self-defense. These and other discrepancies and or

sions were never explained in the court-martial.

A A A

This whole unfortunate affair has lost ground for the U. S. in the entire Far East, not just Formosa. Formosa is very important to us, as we are not committed to its defense just because we like the Chiang Kai-sheks. We are pouring money and knowhow in Formosa because we don't want Formosa because we don't want Formosa to fall into Chinese or Russian Communist hands. For if this unfortunate thing ever happens, it will threaten the defenses of the U. S. in the entire Pacific—as well as the defense of the Philippines, Indochina, Okinawa, Korea, Japan and the entire Far East archipelago. Formosa is important to our defense strategy directly and to the defense of free people against Communist aggression. It is also the beachhead of any effort of the Republic of China to return to the mainland. All these are of direct importance to the United States as well as to the Free World.

A A The Reynolds case is legally closed, as he cannot be tried again for the same crime. Reynolds is free with his own conscience. If what he claimed is true about the intrusion on his wife's bath, he could have socked the intruder in the jaw, along with a reprimand to his wife to install a shade. In this way he could have socked the intruder in the jaw, along with a reprimand to his wife to install a shade. In this way he could have socked the intending in the same crime. Should offer the widow a substantial sum for compensation for the loss of her husband. She is now alone with a baby daughter to support. We have heard of apologies and regrets between the government of the United States and the Republic of China, which were appropriately exchanged — but — I'ly an officia. word from either of them to the one directly affected by the Reynold influenced by a generous gesture of compensation by the U. S. government to Mrs. Liu and her baby daughter. For whatever the rights and wrongs on both surelying human victims of this whole bizarre affair.

Rx FOR GOOD HEALTH

Retirement Plan Problems

Compulsory retirement plans of industry today poss a problem for the millions of people reaching older age. Many of the persons face a rather empty future, for it is difficult to stop suddenly the mental and physical machinery that has been geared to business competition.

Taken away from his job, whether it be manual or mental, the individual finds to many hours in the day and too much time to do nothing. Wise is the pe...on who foresees this inactivity by preparing himself with an avocation.

It is not a deal to leave the complete of the second to the speciality of geriatries came into being for the medical problems of the older person.

The development of these conditions may slow up a person in advancing years, but age itself is not a debilitating factor. Again certain physical changes are natural sequences. Muscles and chest

It is not good to lose interest and a satisfying hobby will not only keep curiosity and zest alive, but very often will create a field of financial return.

Age is more or less an individual problem just as it is

anoual problem just as it is a normal growth pattern. Many persons at 30 suggest physical and mental charac-teristics of aging. Others at 70 may reveal a wrinkled skin which is offset by a sprightly walk and a mental agility.

sprightly wank and a mental agality.

Preventive medicine, through its control of many diseases that formerly took lives, is responsible for extending the life span. Today there are more than 19 million people over 55 years of age. With a greater aging population, new factors develop for their care because this group faces such degen-

The development of these conditions may slow up a person in advancing years, but age itself is not a debilitating factor. Again certain physical changes are natural sequences. Muscles and chest become smaller and the waistline larger. The skin loses its elasticity and tends to wrihkle and to develop certain types of spots and moles. Hair is apt to become gray and thinner.

Because modern medicine is responsible for more of us "growing old," it will also establish a means for caring for the conditions peculiar to old age. Geriatrics is rapidly becoming an expanding field for study and research.

for study and research.

Yerhaps one of the greatest problems of growing old is the feeling that one is no longer needed, that usefulness is over. Everyone wants to be a contributing power, whether it be in business, the home or the community. The end of a long life of service and activity needs a compensatory substitute.

That is why the development of a hobby is encour-

aged. Accept the challenge of aged. Accept the challenge of retirement by getting ready for it now. Maybe the younger years are the more productive ones, but wisdom and experience come with emotional maturity and there is great satisfaction in pursuit of an interest that will keep you happy mentally, and occupied physically.

Communists Stop Rewriting History

The Russians aren't going to have to rewrite history anymore. They made it when they launched their earth satellle.

For years, we have been informed by Moscow that everything from people to electricity was invented by a Rus.

Sian. This, of course, was mainly for home consumption, since the rest of the world snickered at such obvious of the stellite.

It's kinda frightening to Science is marching ahead so fast that everybody is breathless trying to keep up through space, possibly pass, while science is marching. The from the Russian satel lite is beeping its way with it. The trouble is that while science is marching, ahead the frightening to think that the Russian satel lite is beeping its way with it. The trouble is that when the Model is the form of the first of the stellite.

Therms went out, but it's back in the news again as the voice of the satellite.

Science is marching ahead so fast that everybody is breathless trying to keep up through space, possibly pass, while science is marching, ahead the frightening to think that the Russian satel lite is beeping its way with it. The trouble is that when the model are the first of the world snickered at such obvious provide the fright that the Russian satel lite is beeping its way with it. It's kinda frightening to so fast that everybody is breathless trying to keep up through space, possibly pass, while science is marching ahead to the first of the first of the model and the first of the first of the first of the model and the first of the model and the first of the first of the model and the first of th lite is beeping its way through space, possibly pass-ing over the United States at this minute.

through space, possibly passing over the United States at this minute.

It's bad enough that a third of the earth's surface is controlled by the reds, but once they got possession of the moon and Mars, America would be sunk for sure.

Nowadays, it's the ambition of most red-blooded American boys to be the first one to go into space. If the Russians got there, first, they might never get the chance.

**\frac{1}{2} \frac{1}{2} \frac{1}{

within the last 15 years.

Science is marching ahead so fast that everybody is breathless trying to keep up with it. The trouble is that while science is marching, men haven't learned much more about how to get along with each other than the y knew back in the days of the Trojan Wars.

A* **

Man has conquered the atom and is on the threshold of space. He has made life easier for himself through science. Through the weapon of force, he can make his fellows behave as he wants them to, with a generous helping of propaganda thrown in.

Nobody has ever managed to formulate a science of human behavior which would make men behave decently toward each other.

Maybe the Russians have the right idea in planning to send a bunch of animals as the first cargo on a spaceship to the moon.

Goats, cows, sheep, dogs, and cats might make a better civilization than we have. They haven't got enough sense to build a hydrogen bomb.

Middle age is when you go all out and end up all in,— Jules Henry Marr.
