# **EDITORIALS** Groundswell of Apathy

TORRANCE HERALD

Like most school elections in recent city history, the campaign currently in progress to elect two members of the city's board of education appears to be marked by one significant development-apathy.

Although some organized groups have made efforts to stir up an interest in some basic issues in the race, it is believed that a random survey of the school district would reveal an unforgivable lack of interest on the part of large numbers of people. The groups and individuals who have taken the time

to concern themselves with the operations of our schools are to be commended for injecting what little life there is into the election. Several persons have made pointed inquiries into the matter of classroom techniques and academic goals of the school system in Torance-and most of the candidates have outlined their own beliefs on the matter. Still there appears no groundswell of opinion for or against the schools-only a groundswell of apathy.

It should be the duty of each of the city's 35,000-plus voters to check the candidates, their educational philosophy, and their qualifications for the job which they seek. The HERALD urges that each voter take seriously the obligation of choosing his representative at the May 20 election.

# Sounds Risky!

The Florida State Retailers Assn. is sponsoring an annual National Tax Freedom Holiday and is getting groups in other states to go along with it.

Annual Tax Freedom Day, explains the association, marks the day of the year when the average citizen has earned enough to pay his year's taxes and starts keeping his earnings. This year the date has been figured for May 13.

The idea sounds great. A reminder to citizens that they have to work four full months and nearly half way into the fifth month just to pay taxes.

Indignation should result, the sponsors of the day must figure, and taxpayers spurred to fight for a fairer share of their own dough.

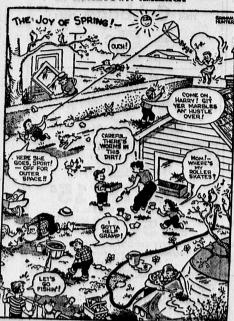

But have the boys thought this thing really through? The tax collector, his attention called to the fact that the citizen keeps seven and a half months of his earnings all to himself, may think he is cheated with only \$4.50 out of every \$12 of a man's money!

Remember the old sayings, boys! When you've got your head in the lion's mouth, don't wiggle it. Let sleeping tax collectors lie! Why tip 'em off?

**Opinions of Others** It might be logical at this stage to say that if the schools were as bad as the critics painted them in the first post-Sputnik days, the U. S. would never have got a space rocket off the ground. We believe, as a matter of fact, that it has been wholesome to take a long, critical look at the U. S. education system. But we doubt if all the breast beating and hair pulling was necessary. The U. S. has been raising a pretty fair crop of scientists after all.

# **U.S. School System Defended** cramming the hard core sub-jects in the USSR. Both of these instances are

PHILADELPHIA, Pa.-In a recent column, "What's Right With U. S. Science and Educa-cation," we reported that American science and educa-tion trained the men and women who made America the most envied nation on earth. We mentioned promi-nent Americans in various walks of life who distin-nent Americans in various walks of the republic and warks of fife who distin-guished themselves since the founding of the republic and asked the question: Dho's ed-ucation and science trained these men?

Readers who are critical of U. S. education replied to the effect that the distinguished citizens we referred to were educated prior to this genera-tion when education was a good deal better. They mailed us statements of other critics of education, describing it as Communist-controlled decacommunist-controlled deca-dent, etc., with conclusions that our school children were unable to read, write or do multiplication tables at age

10. They referred us to the "Life Magazine" feature on education recently which im-plied that the average Amer-ican male student majored in Future dancing and cooking. square dancing and cooking, square dancing and cooking, while the Russian student was all wrapped up in sci-ence and the hard-core sub-jects. These comparisons and conclusions may sound factu-al to critics of U. S. educa-tion but in our opinion most demned. tion, but in our opinion most of them are exaggerated out of all proportion to the facts at our disposal.

Let's eliminate the distin-uished men and women that guished men and women that American education trained in the past, for the benefit of this discussion. Who then, edthis discussion. Who then, ed-ucated our present leaders-those who were in school during the past five, 10 and 15 years? Who educated our present lawyers, physicians, accountants, architects, engi-neers, scientists, designers, financiers, merchants, skilled Workers, statesmer? Who edu workers, statesmen? Who ed-ucated our Washington offi-clais, senators, congressmen, governors, mayors — those who are still in their 30s and 40s? Who educated the thousands of young scientists who helped to perfect and put three satellites in orbit? Who created and produced the fin-est automiles, TV sets, radios, air conditioners, electrical

Rx FOR GOOD HEALTH

The National Swimming Pool Institute predicts that a record 53,000 pools of all types, most of them for resi-dential use, will be built this season. This compares with 30,500 installed last year.

MORE SWIMMING POOLS

they have discovered is by

substituting durable mela-mine dinnerware for their

more breakable crockery. In a recent survey, more than half of the restaurant opera-

tors estimated their annual dinnerware breakage at 10 to 30 per cent, while another 11 per cent of them said one-third or more of their dishes

were broken each year.

Melamine, being exceed-ingly resistant to breakage and 60 per cent lighter than comparable restaurant china,

cuts breakage costs sharply and cases waitresses' loads. About 35 per cent of the na-tion's institutional feeding new is done on melamine

dinnerware.
