

Telephone Bills To Be Prepared By Computer

Beginning next month, Torrance telephone subscribers in Torrance will receive bills which have been prepared by a machine.

A gigantic computer with a "memory" better known as the type 705 Electronic Data Processing Machine, manufactured by the International Business Machines Corp., was installed last week at General Telephone Company's headquarters building in Santa Monica, according to Leroy E. Latin, president.

This machine, which will be in operation next month, represents the first large scale computer in the world to be used by an operating telephone company for preparing monthly bills for subscribers; automatically assigning telephone numbers; preparing service orders and controlling inventory," Latin reported.

HEART OF THE IBM 705 is its "magnetic core memory," which is made up of a network of tiny cores shaped like doughnuts. The decision-making ability of the machine comes from a set of instructions (or programs) stored in the core memory, and on the basis of these instructions the machine can make 1,784,000 decisions per minute in simple decision such as whether a line is one-party or two-party, etc.

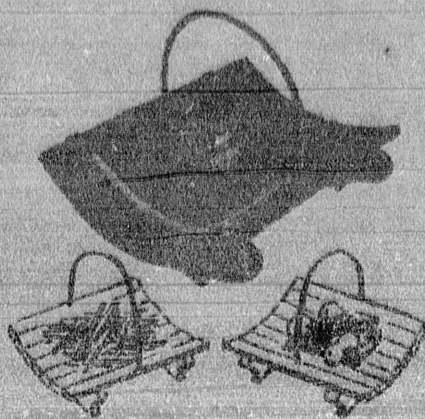

The tape is "read" or written on" by the machine at 75 inches, or 15,000 characters per second. So compact is the coding that the entire text of "Gone With the Wind" (some 1,000 pages) could be recorded on one-half a reel of tape, and it could be "read" by the computer in three minutes.

CHRISTMAS PARTY

The annual Christmas party sponsored by the Moose Lodge and Women of the Moose will be held at the lodge hall, 1744 W. Carson St., Sunday afternoon, Dec. 21. Santa will visit, Mike Cleere, chairman of the Torrance Moose Lodge, announced this week that the lodge would schedule its annual New Year's Eve party at the lodge hall on Dec. 31.
