Torrance School Costs

A statistical report about to be issued by the Torrance Unified School District shows current average expenses per pupil of unified schools districts in Los Angeles County at an estimated \$475. Torrance costs are set at \$384.38 making it possible for the local district to lay claim to having the lowest in the county.

"Actually Torrance is the most economically operated unified district in the county on a cost per pupil basis," said Dr. J. H. Hull in a letter to this writer. He adds: "If this position means efficiency, we are proud of it; but if it means that we are shortchanging our students, we think ft should be examined."

In these bleak days following receipt of their tax bills property owners welcome any kind of assurance that their dollars are being spent wisely. Any individual wise and thrifty enough to desire home ownership or other realty investment realizes the necessity of the best possible school system. He usually can reason, also, that being located within a soundly operated unified school district contributes in no small way to the enhancement of the value of his

Bronson C. Buxton

The death of Bronston Buxton removes from the Torrance scene one more of a past generation that contributed to the strength and growth of America.

In his many associations in the business and civic life of this community over the past 35 years of a long and active life, Mr. Buxton never failed to impress those with whom he came in contact as a mild but very influential force for the perpetuation of the American type, now so rapidly disappearing from this new and rushing era.

He was a genuine pioneer in the automobile business starting in the East with Locomobile. Just before coming to Torrance in 1927 he had risen to the position of vice president of the Apperson Co. in Kokomo, Ind. Previously, Apperson had been in partnership with Haynes, generally recognized as America's first successful automobile.

Gentlemen of Bronson C. Buxton's generation have made a lasting (we hope) contribution to the great American heritage. Torrance wos fortunate that he selected this place to spend a goodly portion of a long life well lived.

Opinions of Others

The truth is that in the lower job levels, federal pay is higher than comparable work in private business.— Mount Olive (N. C.) Tribune.

When most of us think of a Texan, we're inclined to think of a man with a big hat, bigger roll of greenbacks, and well-to-well carpeting. During one 15-year period, however, one Texan drilled 188 dry holes at a cost of nearly \$21/2 million .- Ojai (Calif.) News.

Morning Report:

If the polisters had a hard time telling in advance how the people were going to vote, the pundits are having it even tougher deciding how they voted now that the ballots have been counted.

As I read the experts, the election was a victory for President Kennedy and Senator Goldwater, who weren't running for anything, and a defeat for Rockefeller and Romney, who got elected. The long-view viewers see defeat or victory for moderate or conservative, or just plain Republicans and Democrats.

What it all boils down to is that I can hardly wait for the pre-election polls of 1964 so I can find out how we made out in old '62.

Seventh Graders Provide **Key to Home-School Ties**

rance seventh grade students two years ago under the guidance of a University of California at Los Angeles study team indicate a varying relationship between the students' homelife and their achievement in school

Findings of the study team with relation to the family background have been compiled by Carl Weinberg as a doctoral dissertation at UCLA under the title, "Family Background and the School Adaption of Seventh Grade Pupils." A summary of his findings was presented to members of the Board of Education here this week.

Whether the home is brok-en or intact does not appear to influence either achievement or conduct, according to Dr. Weinberg's part of the study. He found that an only child and the eldest child in a family achieve significantly higher in reading, writing,

and mathematics, and that achievement scores of children tend to decrease as the

size of the family increases. He also found that physical mobility—the time a student is forced to change schools because the family residence is changed—was unrelated either to achievement or conduct.

Where both parents were working, however, the pupils achieved at a lower level level level in reading or writing, he found. On the other hand, mathematics and conduct apparently were not affected by parently were not affected by working parents.

Among other findings of the schoolwide study of sev-enth graders was that the student, especially girls, from the higher income homes achieved better, but that con-duct was not related.

In gross statistics of the city's seventh graders at the time of the study, the UCLA team found that 13.3 per cent came from broken homes, that 31.3 per cent of the children came from homes where both parents worked, and that the mean number of dependent chil dren (under 18) in the household was 2.286.

A study of selected groups of students led to several in-teresting conclusions. Stu-dents were selected for one

group on the basts of their achievement, leadership, and general contributions to their classes. Another group was chosen from those who contributed to classroom con-flicts, through disobedience, lack of effort, and general

nonconformity.

A test of intelligence quotients showed a larger percentage of the disruptive group below the 100 level However, there was no great er proportion of "deviant" students from broken homes than the number expected in the total enrollment.

* * * Among other findings in a comparison of the two groups

 Working parents did not result in a larger proportion of "deviants" from such · The greater the number of

school changes, the greater probability that a student will be in the "deviant"

No relationship was found to exist between socio-eco-nomic position and placement in either of the two groups.

 Achievement is lower in the deviant group in reading, writing, and mathematics. · The stronger the feeling of

liking for school, the greater the probability that the pupil will be found in the conforming group. "Deviants" dislike school more than does the other group.

Problems of the South **Get Authors' Scrutiny**

critic Hoke Norris has gathered a collection of statements by writers, journalists and thinkers under the title "We Dissent." Like Norris, originally from South Carolina, his fellow contributors to this symposium are all white, Protestant Southerners -14 of them, from novelist

Paul Green. The purpose is to give voice to the opposition in the South—one, Norris emphasizes, that is growing in size, diligence, influence and effectiveness. The opposition chiefly is to rabid segregationists, the White Citizens Councils. the fanatics.

Borden Deal to playwright

* * *

These are voices of "stub-born but benign realists," Norris points out in his intro-Norris points out in his introduction An so we find
a group of Southerners talking about themselves. Are
there any quick, easy solutions to what is sometimes
glibly called the "Negro
problem," but just as easily
might be called the "white
problem" down there? None.
But there is much good

But there is much good sense here, including a tran-script of his 1960 sit-in speech by former Governor Collins of Florida, which was credited with prompting or-derly desegregation in that State. Altogether, this is a a heartening book. This paragraph, from an entry by Ralph McGill, publisher of the Atlanta Constitution, suggests its flavor. its flavor:

"Nothing in the South is left unchanged by the chan-ges that are occurring. And for the overwhelming majority of Negroes there is a pio-neering determination to be-come more American, not less... Day-by-day opposition to the Negro's rights of equal citizenship finds itself more and more in the position of

DIED IN THE WOOL

opposing the law . . . Tactics of delay and defiance cannot long sustain themselves, particularly in the urban munities, where the total of qualified Negro voters grows larger and larger. The de-pressed rural defiance will, in good time, fall of its own weight. The end is not yet in sight — but it is there."

Then there is a book called The Southern Case of School Segregation" by James J. Kirkpatrick, editor of the Richmond, Va., News Leader (Crowell-Collier; \$3.95). This purports to deal with "harsh truths."

One of those is that while desegregation as a legal principle is here to stay, this principle, in Southern schools,

can be put into practice in one way only: "slowly cauone way only: "slowly cautiously, voluntarily." Arguments of anthropology, practicality and gradualism a re
stressed in Kilpatrick's Southern case. This freedom of
speech, of course. But from
what I have read of this book
(and it is hard going, believe
me), I feel free to label it
spinach — slowly, cautiously
and voluntarily.

Around the World With

DELAPLANE

"What do you think is the ideal Christmas and New

I like Christmas in the snow country of Austriabut will settle for the California High Sierra this year. New Year's Eve I expect to be under a coco palm on the beach at Waikiki.

"We are going to Mexico for the first time in December. Is tequila the only Mexican drink? Wt have heard it is lethal .

There are a number of Mexican-made rums-Ron Castillo is a nice light one. Bacardi of Cuba makes a Mexican rum under the Bacardi label. (But not as good as the one from Havana.)

Tequila dates back to the Aztecs, who learned how to squeeze juice out of the century plant (agave)and ferment it. It has a strength a little less than gin. It is usually colorless and white. But there is a yellow one that is supposed to be aged. Unless you get it around Guadalajara, though, it is aged by adding chemicals.

The classical way to drink tequila is with a wedge of lemon and salt. Put the lemon wedge between your thumb and forefinger. In the fold of the skin between the thumb and finger pour a little salt.

Now-lick the salt. Drink the tequila. Suck the lemon.

Mexicans sometimes flavor tequila with a drop of Maggi sauce in the bottom of the glass.

There are cocktails for the tourist trade. This is the Margarita: Wet the rim of a champagne glass and edge the rim with salt. Pour in this iced mixture: Half jigger Triple Sec, juice of one line, jigger of tequila-all shaken up with shaved ice.

"Can you suggest something different for a holidayparty punch? Something with champagne?"

Bar Cintra in the Place de l'Opera in Paris serves

what they call a "cup"-they pronounce it just as we pronounce "cup."

First you need two bowls-Bar Cintra used a glass bowl inside a silver bowl. Put the smaller bowl inside the large. Fill the space between with crushed ice.

The mixture in the small bowl: Two bottles of champagne. An ounce each of cognac, apricot brandy, peach brandy, creme de banane, maraschino. Add small slices of half an orange, banana, peach and apricot. Let it stand and chill a couple of hours.

Serve this in six-ounce glasses. Fill the glass twothirds full of the bowl mixture. Then top it with another third of freshly opened, chilled dry champagne. It's a lot of work. But you make many points.

"... something simple but foreign for a holiday party?"

A simple one is akvavit. Freeze the bottle in a block if ice, leaving the neck clear to hang onto. You pour this in tiny gla chaser. Swedish akvavit is the best. Tuborg or Carlsberg is the beer.

You should serve little squares of buttered brown bread with this. Top each one with tiny cold shrimp. Don't get the bread flavored (no rye). The akvavit has a caraway taste. So don't compete with it.

"With one night in Rome, should we eat at Alfredo's (recommended by friends for Roman atmosphere)?"

The two Alfredo's and the famous fettuccine seem to me to have the Roman atmosphere a la New York. If I had the one evening, I'd have dinner under the 400-yearold grape arbor beside the broken Roman wall at Romolo's. Across the Tiber.

This was the home of Raphael's mistress and this is where he painted her. The chicken in green peppers i wonderful. And if the guitar player is still there, you' be up to the heart in sentiment all evening.

ROYCE BRIER

Determining 'Offensive' Weapons Poses Problems

In the compass of any inspection of the Soviet arms build-up in Cuba, lies a difficulty. It may be posed in a question: what is an offensive weapon—where is the line between offensive and de-

fensive? Pursuant to his announcement of a quasi-blockade of Cuba he called a "quarantine," President Kennedy published an Interdiction, setting forth the prohibited materiel as follows: "Surfacemateriel as follows: "Surface-to-surface missiles; bomber aircraft; bombs; air-to-surface rockets and guided missiles; warheads; mechanical or elec-tronic equipment to support or operate the above; mater-iel hereafter designated by iel hereafter designated by the Secretary of Defense . ."

Premier Khrushchev in his etter to the President agreed to remove weapons "you" consider offensive.

No one doubts surface-to-surface missiles with war-heads are offensive. But in the development of

our modern weapons technol-ogy, many weapons are not exclusively offensive, and some may be primarily de-

activated. All small Caribbean nations have light bombers, though they are not equipped with nuclear bombs, as Castro's presumably are. Such a bomber may repel an invasion or put down a revolt (they were flown, but did not bomb, in two recent small

Venezuelan revolts). Yet what we call a bomber is not needed to deliver a bomb. Castro is reported to have over 100 MIGs. These are fighters, but they can be rigged to carry one bomb in rigged to carry one bomb in the Caribbean range, and if it is nuclear it would wipe out

Similarly, air - to - surface rockets are standard equip-ment in many small-nation air forces, where they may be used air to air The Interdiction did not spell out nuclear bombs as prohibited, only "bombs," and curiously, it did not mention rocket fuel.

groups to operate antiaircraft. Presumably surface armor, such as tanks, is defensive, yet it could be used in amphibious landings in Haiti.
The fact is Castro, with

only a few old-fashioned fission bombs in the kiloton range, is a peril to every Caribbean and Gulf nation, which cannot retaliate in kind. Yet these can easily be concealed from inspection.

We are not yet out of the woods with Fidel Castro.
