Four local residents who are employed by the Aerospace Corp. can smile with confidence at the success of the Titan II missile which placed an unmaned Gemini space vehicle into orbit around the earth last week.

Aerospace Corp. will remain in the Gemini project until the entire study has been completed. Project Gemini is designed to place two men in chamber pressure and angular orbit for these turns round the

space venice into orbit around the earth last week.

Aerospace Corp. is responsible to the Air Force for the general systems engineering and technical direction of the Gemini - Titan II launch ve-

The four local residents are members of the Aerospace Corp. Gemini launch vehicle main of 3/19 W. 225th St., M. C. Shrader of 5404 Carol Drice, L. E. Wood of 23400 Evalyn Ave., and S. Coughlan of 115 Via La Soledad.

THE GROUP works under the direction of Bernhard A. Hofmann in support of the Na-tional Aeronautics and Space Administration's Gemini man-

Administration's Gemini man-ned space program.

Under the Aerospace Corp.
contract, the firm is responsi-ble for the over-all develop-ment of the vehicle and launch complex for the integration and operation, and for analysis of subsystems and supervision

of subsystems and supervision of systems testing.

Aerospace Corp's experience with manned space flights began with Project Mercury. Most of the same engineers who contributed to the systems of the Mercury-Atlas complex are now at work on Project Gemini. The firm maintains an office at the Atlantic Missile Range in support lantic Missile Range in support of Project Gemini, with Newton A. Mas as manager of the

AFTER considerable study, Aerospace recommended the use of the basic Titan II engines for the Gemini project. A program is now underway at Aerojet-General and Aerospace Corp. which monitors the ef-fort where in concerns Project

the technical aspects of the Gemini-Titan II pilot safety program. The program involves four phases: quality assurance during production,

pleted. Project Gemini is designed to place two men in orbit for three turns round the chamber pressure and angular velocity of the booster, should irregularities exist, the MDS would immediately inform the two astronauts aboard the Gemini spacecraft. They could then decide if there is sufficient cause to terminate world by the end of this year. cient cause to terminate (abort) the mission.

THE COMPANY also has the responsibility for converting the Complex 19 launch area at Cape Kennedy, which has served as a launch complex for Titan I missiles, to a "manrated" complex for the Gemini-Titan II vehicle.

The new complex provider for a mobile electrical check out monitor which was built by the Martin Co. The unit is housed in two 20-foot trailers which are moved to the complex several days before a launch. Probes are connected to the equipment and more than 100 critical points are monitored.

Aerospace also has developed a new system that will provide an umbrella of water to cover the launch pad and immediate area should a malfunction cause the Gemini astronauts to cause the Gemini astronauts to eject themselves from the spacecraft. Water jets are strategically located to provide a cover to a height of five feet. Soaking the astronauts, the water will provide a continual depontamination. decontamination process to protect them until the rescue squad arrives.

THE BASIC Titan erector (gantry) was extended to accommodate the larger Titan II vehicle. A "white room" was constructed atop the gantry to provide a conditioned, rainort where in concerns Project emini.

Aerospace is responsible for of the Gemini spacecraft.
