

ON THE MAP . . . Members of the Lomita delegation which boarded the Kiwanis Cannonball in Torrance Sunday to travel by train to the International convention at the Sports Arena didn't want any passerby to wonder about Lomita as the signs proudly proclaimed it California's newest city. It was so new, in fact, that it was not officially a city until yesterday. (Press-Herald Photo)

Sunday Lesson Will Seek New Understanding of God

Modern man's need for a new and greater understanding of Deity will be explored at Christian Science churches Sunday in a Bible lesson sermon entitled "God, the waters cover the sea."

Arthritis and the rheumatic diseases are the most widespread chronic afflictions in the United States, the March of Dimes reports. They represent one of the most neglected health problems in the nation.

Groundbreaking for Industrial Center Scheduled for Mid-July

Groundbreaking for the 600-acre, \$150,000,000 Watson Industrial Center—one of the largest ever developed in

Montgomery Teacher to Head Class

Sister Cecilia Clare, science and math instructor at Bishop Montgomery High School, has been named coordinator for the School Mathematics Study Group Workshop for the Los Angeles archdiocesan school system.

The workshop is required of all teachers of math in the archdiocesan school system, according to the Rt. Rev. Joseph F. Sharpe, superintendent.

The workshop, which began June 23 at the downtown campus of Mt. St. Mary's College, will continue through July 30. It carries two units of credits, applicable on graduate or undergraduate levels.

Sister Cecilia Clare, an experienced modern math teacher, was trained at the University of Notre Dame.

Southern California—will begin here in mid-July.

The center—which will embrace light, medium and heavy industry—is being developed in the southern part of Los Angeles County, about one mile west of Long Beach.

Its sponsors, the Watson Land Co., estimate that the center will take 15 years to complete and will contain at least 100 different companies. Watson Land President William T. Huston said the company currently is negotiating with several prospective tenants, but declined to identify them until leases are signed.

PLANNING, development, and sales are being directed by the William J. Moran Co. of Los Angeles, 100-year-old, nationally known engineering, construction and development firm.

Construction of some off-site improvements has already begun. These will include a \$750,000 storm drain system, underground telephone lines, and 60-foot-wide paved streets.

The property is bisected by the San Diego Freeway and lies midway between the Harbor and Long Beach freeways,

each about one and one-half miles away. It is three miles from the Los Angeles and Long Beach harbors, and about 12 miles from Los Angeles International Airport.

HUSTON SAID the center has been master-planned for a balanced mixture of industry. Buildings typically will range from approximately 20,000 square feet to more than 200,000 square feet, "but 100-acre sites could be developed for a single tenant."

He also emphasized that there will be deep setbacks; loading and storage areas will be well screened; parking will be off-the-street; and leases will include requirements for comprehensive landscaping.

Land in the center is for lease or sale, Huston said. Total leasing packages, including tailored construction and financing, also are available.

THE PROPERTY is in the middle of an urban area but has more than 40 residential communities, containing more than 1,000,000 people, within a nine-mile radius, Huston said.

Most of the land in the center represents one of the last parcels of old Spanish land grants acreages that are still in the hands of descendants of the original grantee. It is part of a 76,000-acre grant made in 1784 to Juan Jose Dominguez, a Spanish soldier who participated in the Portola expeditions, which helped colonize San Diego, Los Angeles and much of the California coast.

CONCORD 550-4 new! from Concord for '64 TRANSISTORIZED STEREOPHONIC 550-4

Engineered with professional quality features for Connoisseurs of Sound

- Transistorized: freedom from noise, heat and hum
- push button operation, three speeds, sound-on-sound recording, dual amplifiers, two VU meters, automatic shut-off, separated speakers
