A Mayfair Exclusive "IT'S GOOD"

WHAT IS VIM?

Vim is a non-fat fresh milk product.

HOW IS VIM MADE?

Vim is made from fresh Grade A Milk by centrifugally removing the butterfat and replacing it with non-fat milk solids, adding Vitamins A and D, homogenizing and pasteurizing it.

WHO SHOULD DRINK VIM?

Anyone in the family who likes good, nourishing food. Infants and older folks too, need a food

IS VIM NON-FATTENING?

Yes! even regular milk is relatively non-fatening, but Vim is exceptional in this respect, Butterfat has been replaced with energy-producing proteins and minerals. Drink all of the Vim you want-it isn't fattening.

IS VIM NOURISHING?

Yes! In a quart of Vim you get some of every single food factor you need. There is 35% more protein, calcium, and other food factors than regular milk contains, plus added "Natural" Vitamin A & D. Only the fat has been removed.

IS VIM GOOD TASTING? Yes. The additional solids restore the flavor. "It's Good" for drinking or cooking. Use Vim like regular milk.

IS VIM ECONOMICAL? Yes indeed! Few other foods are priced as low per pound-regardless of food value.

WHY ADD VITAMIN D TO VIM?

Because Vitamin D works with calcium and phosphorous in building and keeping strong bones and teeth. "Natural" Vitamin D comes from rich, natural marine sources.

DOES ADDING VITAMIN D CHANGE VIM? Only to make it better for you.

WHY ADD VITAMIN A TO VIM? Milk ordinarily is relied upon to supply some Vitamin A, even though its Vitamin A content varies greatly from season to season. But removing the fat also removes most of that Vitamin A content varies of the vitamin and vi min A. That's why 2000 units of Vitamin A are added to each quart of Vim, This "A-D" milk product will supply a standard amount of important Vitamin A, all year round.
