The "people of Union Carbide" will soon include the men and women who will operate the Carbide and Carbon Chemicals Company plant now under construction.

**Without air, life stops ... for you and for industry**

SEEING A CLOUD is probably the nearest we come to 'seeing' air, because air is made up of a mixture of invisible gases. These gases, however, can be separated from each other and put to work in a variety of ways.

**OXYGEN**, the most vital gas, comprises about 21 per cent of the air. We all know how it helps sick people get well, but perhaps do not realize that steel and other major industries could not operate without the same oxygen in tremendous quantities.

About 78 per cent of air is nitrogen. Food processors use nitrogen as an atmosphere to protect freshness and flavor of food.

**FIVE "RARE" GASES**, argon, krypton, neon, helium, and xenon—make up the remaining one per cent. They are rightfully called rare. For example, there is only

one cubic foot of xenon in every ten million cubic feet of air. These gases are essential in making electric lights, in welding processes, and in refining new metals such as titanium.

**FOR MANY YEARS**, the people of Union Carbide have been taking the air apart and finding new ways in which it can help in making a better life for all of us.

**FREE: Learn how ALLOYS, CARBONS, GASES, CHEMICALS, and PLASTICS** improve many things that you use. Ask for "Products and Processes" booklet.
