Hoffman

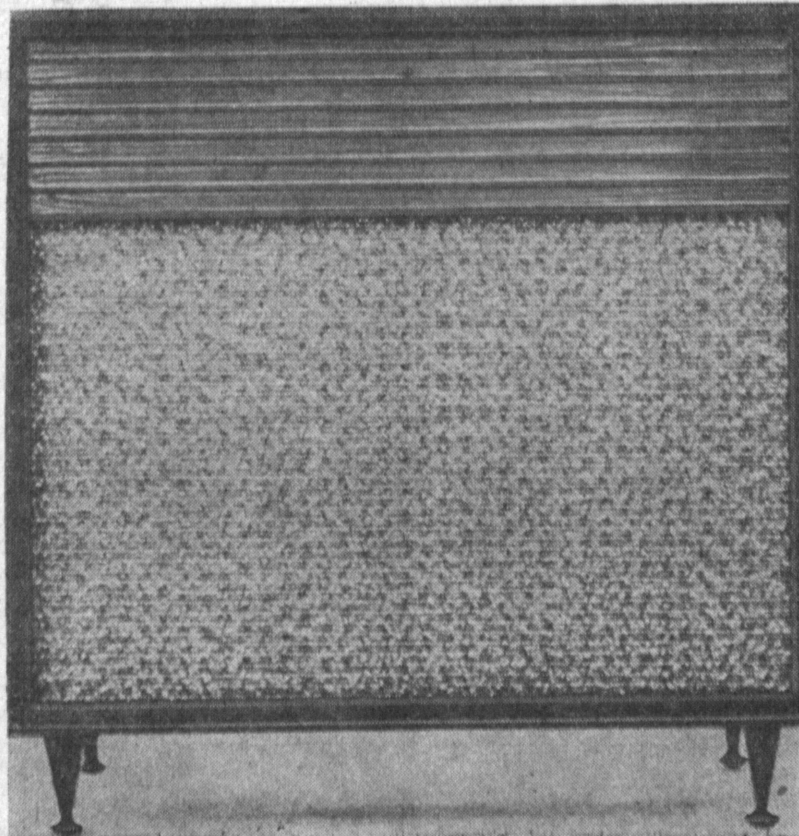

"FLOATING SOUND"

AT LAST!
CUSTOM PERFECT
HI-FIDELITY IN
JUST ONE CABINET

Exclusive floating sound chamber encloses 3 Jensen speakers in solid mahogany. Mounted on springs. Hoffman unique speaker enclosure floats inside the cabinet to prevent vibration of other components from causing feedback or distortion—See the many other features illustrated below . . .

AM-FM PHONO
COMBINATIONS from

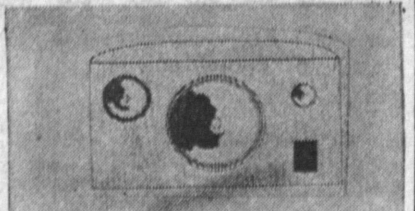

269⁹⁵

25-WATT HOFFMAN AMPLIFIER

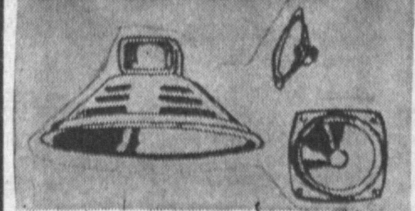

This superb component is the heart of the Floating Sound audio system. Distortion is negligible at 15 watts, flat within plus or minus 3 db from 30 to 20,000 cps. It incorporates an inverse feedback output transformer, contoured loudness control, pre-amplifier with hum balance control, and exclusive Frequency Scope for visual adjustment of tone controls. Additional inputs are provided for tuner, tape player, and auxiliary.

FLOATING SOUND CHAMBER

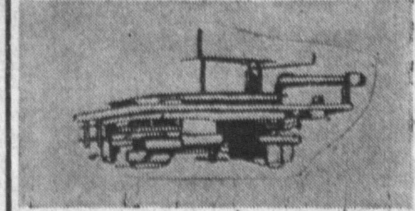

Hoffman's Floating Sound speaker enclosure is made of solid mahogany and is spring-mounted within the main housing to prevent vibrations in other components. Padded reflex design provides reinforced bass frequencies for smooth response without resonant peaks . . . overall response closely approaches characteristics of an infinite baffle.

JENSEN LOUSPEAKER

Used in the finest theater and custom sound systems the world over. Three matched Jensen Alnico V speakers — 12-inch bass "woofer", 5 1/2-inch mid-range, and 3 1/2-inch "tweeter" — are combined with an electrical crossover network to funnel tones to proper speaker for minimum intermodulation distortion.

4-SPEED RECORD CHANGER

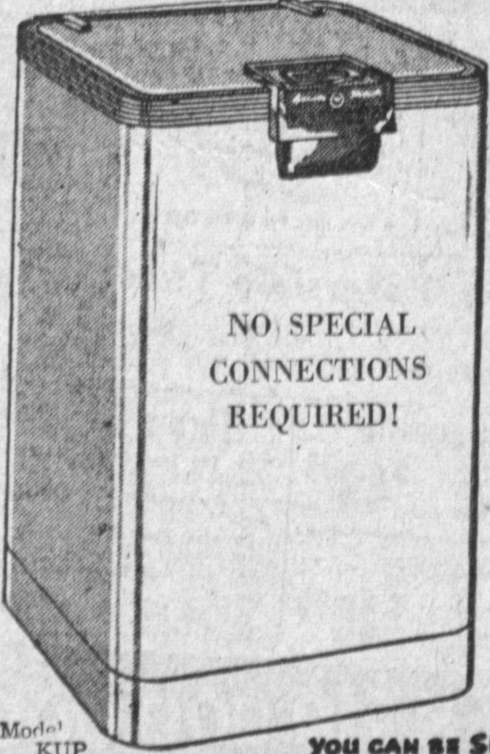

Named as the world's finest changer, the Garrard is imported from Great Britain. It features a wow-free 4-pole motor, dual sapphire styl and ceramic pickup, steel precision turntable with rubber traction mat, automatic intermix and shutoff and special 45 rpm spindle. Designed for reliability, high fidelity performance & ease of operation.

HOFFMAN AM-FM TUNER

This advanced-design tuner provides extreme sensitivity and stability for both AM and FM reception. Sensitivity is two microvolts for 20 db quieting. It features cascade-tuned RF stage, APC control with switch, lighted slide-rule dial and new precision Tuning Eye for easy visual tuning adjustment. Built-in AM and FM antennas with provision for external antenna.
